

Candidate should develop the scenario for creating the list of accounts according to the design.

Steps for the realization:

- Log into <https://bitbucket.org>, clone the repo [1]
- Realize all features in own repo
- Give a link to the repo

Functionality which needs to be developed use angularJs/Angular:

- Create same lists of accounts (fig. 1)
- Implement created account feature (fig. 2)
- Implement validation form for creating accounts (fig. 3)
- Implement sorting by date

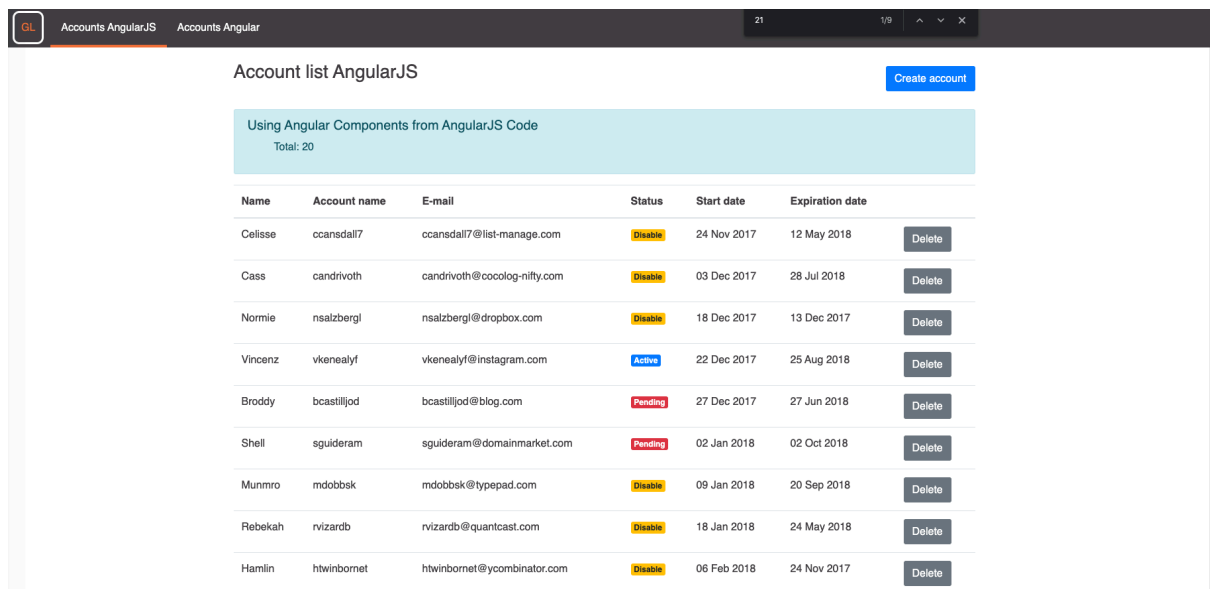

It will be a plus:

- Adaptive responsive layout for different devices;
- Automatic tests.
